MISSION

Bollinger Shipyards is the leading provider of quality construction, repair and conversion products and services to the marine industry, delivered in a safe and environmentally responsible manner.

VALUES

Commitment to Safety
Importance of Relationships
Pride in Workmanship
Respect for Others
Honesty and Integrity
Support for Our Community
Respect for Environment
Family Atmosphere

QUALITY POLICY

The Vision, Mission and Values statements of Bollinger Shipyards are essential components to the success of our business. We work hard to continually improve our integrated Quality Management System. This framework helps ensure that we deliver the highest quality products and services possible, meeting or exceeding our customer's expectations while complying with all contractual requirements.

Machine and Hydraulic Shops

Bollinger's machine and hydraulic shops are full-service machining facilities with line-boring capabilities. They are equipped with computer-controlled technology in the manufacture, repair and reconditioning of propeller shafts, stern tubes, bow and stern thrusters, chemical pumps, rudders and other underwater gear. Bollinger has 18 ABS-approved welding procedures used in the manufacturing and repair of shafts.

Armature Services

Bollinger's armature facility has the capability to repair all types of AC and DC motors and generators of any size. We provide in-shop and field service for the maritime, petrochemical and commercial industries, as well as municipalities, both state and local. Load-testing capabilities include modern equipment with a capacity of up to 1000kW that will meet ABS requirements for the testing of generators. The facility is guided by Bollinger policies and procedures that are based on and registered to the ISO 9001 standard.

Blasting and Painting

Providing mobile crews for offsite and specialized projects.

Fabrication Services

Modular fabrication and construction of components for oil and gas and marine applications. Covered fabrication/assembly shops and ample dockside assembly areas for load-out and transportation by water or land.

Propeller Service

Bollinger's propeller shop is a modern, 27,500-square-foot fully equipped manufacturing and repair facility featuring pitchometers and four hydraulic presses with up to 400 tons of capacity. This allows straightening and re-pitching of propellers as large as 20 feet in diameter without heating the metal.

Project Engineering and Fabrication Services Bollinger's Project Engineering Services provide engineering design and drawing development for repair and conversion, as well as fabrication projects. These experts are dedicated to the repair yards within our company and have a unique understanding of our customers' special requirements on existing vessel project demands. They ensure that projects flow smoothly and efficiently, they assist customers with developing plans, and assist with regulatory approvals from ABS, USCG, DNV and others.
